

# PB2034VXA - When Only the Best Will Do

## 2034VXA *Adjustable* SANDCARVING SYSTEM

In my trophy business after many years of buying equipment I have learnt (sometimes the hard way) that when it comes to buying equipment just buy the best available that has solid service and technical support. Last year we bought our second digital printer and the choice became simple – Mimaki. Nothing comes close to it in performance and solid support. I was amused to here that my Chinese Crystal contact emailed me recently saying they now do digital printing and sent me a picture of their new pride and joy machine. It was a Mimaki. Even the Chinese, who have a choice of about 10 different Chinese manufactured digital printers that cost a quarter of the price, bought Mimaki.

You cannot substitute rock solid quality and performance with saving dollars on the purchase price. In any case, usually equipment is purchased on lease so payments are spread out and paying for top shelf gets amortized over 4 or 5 years.

But wait a minute; this article is not about digital printers it's about the world's best, by far, Sand Blasting system on the market today. ProBlast's PB2034VXA sand Blasting system is the system that will not let you down, will provide the fastest blast production and will always be supported by a highly experienced Tech support team made of master blasters who work with sand blasting every day. The choice is simple. Going with what you know will be the best production system to maximize efficiency and profitability. So why is the PB2034VXA the best system on the market today? Lets go through just a few of the features.

- ✓ Exclusive Electronic Height Adjustment
- ✓ Exclusive Vortex Dust Extractor

- ✓ Exclusive Air Flow Curtain Window
- ✓ Lockable caster wheels for easy move
- ✓ High quality Industrial grade parts
- ✓ Auto Recycling System
- ✓ Largest Work area of it's size
- ✓ Conformable Padded Arm Rests
- ✓ Over Sized Viewing Window
- ✓ Halogen Lights
- ✓ Double Door System.
- ✓ 100% Seam Welded
- ✓ Quality Powder Coated Cabinet
- ✓ Life Time Tech Support

## Feature Highlight

### Bits and Pieces.

The PB2034VXA is designed to keep going and is a very low maintenance system. Hoses, foot pedals, valves, connections, all the parts that connect the system and make it work are the best quality available. We want your system to work, we want you to get on with the job. The PB2034VXA will satisfy the most stringent customer. And it does. Even the Australian Mint use our sand blasting systems to clean up the dies for Australian Coins.

So we are carrying around in our pockets the result of a PB2034VXA. Major Australian glass artists like Holly Grace, Kevin Gordon and Kate Baker all choose the ProBlast Pressure Pot Systems because they are reliable and efficient. The PB 2034VXA is the best choice for companies wanting the best most reliable equipment with the best technical support.

### Automatic Re-Feed Pressure Pot System

The Pressure pot is permanently housed under the sand blasting cabinet and re-fills itself when the pot becomes empty and this process keeps the abrasive contained inside the cabinet so no change over dust and fast refill process allowing you to get back to work fast.

### Dust Extraction System

The Vortex dust extractor efficiently separates the dust from the re-usable abrasive and

keeps you cabinet clear so you can always see your work. The HEPA filter system keeps the exhaust clear and clean. And IT'S SURPRISINGLY QUIET. Switch on the sand blaster and the lights and extraction motor come on and you'll be surprised at how quiet the system is when in full operation. No need for ear plugs and no un-wanted noise in sensitive areas.

### Comfort

Keep your workers comfortable while they are at work and you'll keep them happy. The PB2034VXA and a hydraulic height adjustable legs so short people and tall people alike can set the height of the system to their own comfort level by the turn of a switch. Along with Padded arm rests your operators will appreciate the care that you and us have provided for their ergonomic comfort. The system also comes on wheels so it is easily movable.

### Efficiency

With its 86cm x 52cm work area you can load a bunch of glass trophies or metal panels at one time. The system has doors on both sides so it can be set up in a work shop where you load the cabinet one side and unload the other to create a good production flow.

A pressure pot system etches at about twice the rate of a syphon system so your work gets done twice as fast and with the clear view dust extraction you can see what you are doing at all time.
